OneCloud Network

A complete solution for cloud connectivity

Bendigo Telco's OneCloud Network offers organisations secure and reliable connectivity to the world's leading cloud technology providers. Utilising our national MPLS network, our OneCloud Network can connect your business directly to Microsoft Azure, Amazon AWS and IBM SoftLayer cloud solutions. This enables your business to have greater flexibility in selecting a cloud vendor, while having peace of mind that your data is being transferred over private and reliable network connections.

Private Cloud Access

Bendigo Telco's OneCloud Network provides private access to the world's leading cloud vendors, providing your business data security while leveraging the benefits of public cloud.

Reliable Connectivity

Cloud services are connected via business grade data links to ensure maximum reliability. Geographically diverse primary and secondary links can be utilised for the ultimate reliability, allowing business to continue without disruption, even in the event of hardware failure.

Choice of Cloud Providers

Don't be constrained to just a single cloud vendor. Bendigo Telco's OneCloud Network provides access to the world's leading public cloud providers.

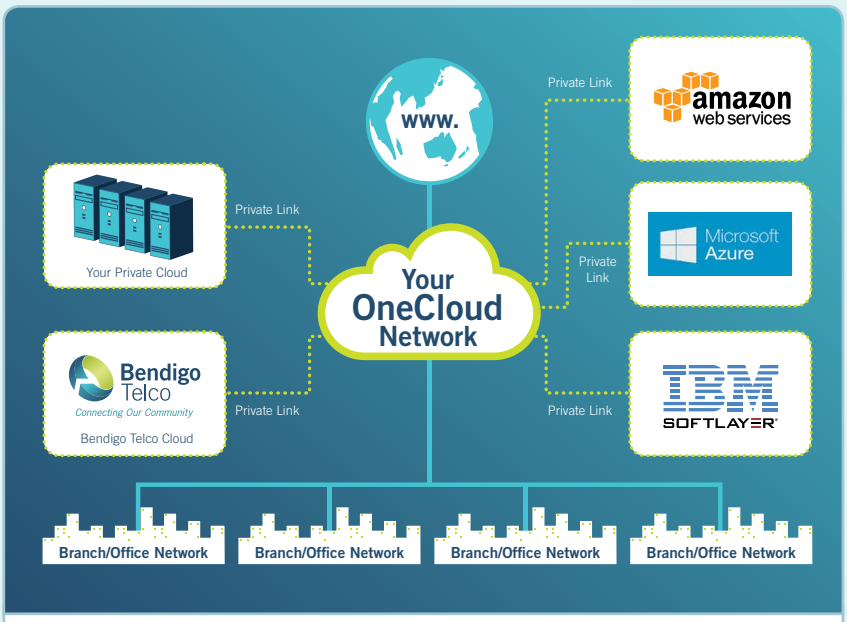

Diagram 1: Public cloud services are delivered via secure, private links directly into your OneCloud Network. These services can then be accessed by your office or branch sites via our national MPLS network.

Enable Hybrid Cloud

Bendigo Telco's OneCloud Network gives your business a simple path to embrace Hybrid-Cloud, enabling your IT teams to create the best fit solutions for your business in the most cost effective manner.

Connecting Our Community

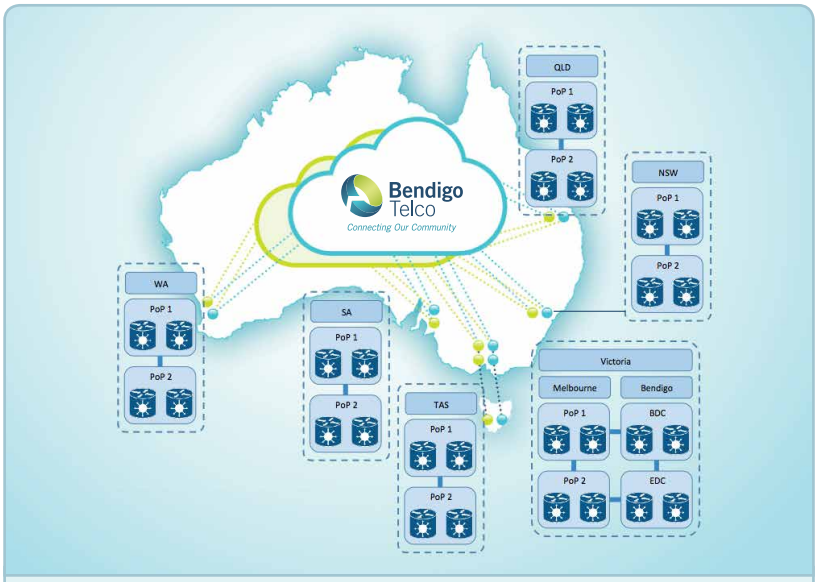

Diagram 2: Access to cloud services is obtained via our data centres and is connecting into your network via business grade links.This network has been purpose built for the ultimate reliability to keep your business online.

Simple Network Integration

Access to public cloud is made simple as network links are integrated directly into your network, removing the need for complex firewall configurations.

National MPLS delivery

Access to your chosen cloud services is delivered by our national MPLS network, ensuring applications can be accessed from all of your branches nationwide.

Public Cloud Expertise

Bendigo Telco's engineers have extensive experience in utilising public cloud in a wide range of business applications. Our team of experts can help your business select the right cloud service provider for your specific applications.

OneCloud Management Console

Bendigo Telco's OneCloud Management Console provides you visibility to all of your cloud infrastructure, whether you are running public, private or hybrid cloud models. This single view into all of your cloud services makes management of your applications easy as it provides a single point of reference for all of your cloud management needs.

OneCloud Management Console enables your business to:

- Simplify management of cloud services
- Take advantage of the cost benefits of public cloud
- Produce utilisation and performance reports
- Reduce turnaround times for business applications due to simple role-delegated provisioning
